

## E4 Acids, Bases, and Salts

### Session One of two session lab

- Complete Parts 1 and 2 in lab. If time allows, start or complete Part 3.

### Reminder:

Pre-lab report, page 112, due at start of lab.

---

---

---

---

---

---

---

---

## Acids and Bases

Q. Are acid-base properties of substances predictable based on their chemical composition?

### Common consumer products

Household acids

Household bases

---

---

---

---

---

---

---

---

## Part 1. Structure and Acid-Base Properties

### Information

- Acids and Bases *usually* contain O, H, and another element (X).
- Teams will be provided with compounds labeled with the formula  $X_cO_aH_b$   
(X= some element; a, b, and c = some number)

### Lab

- Determine if compounds labeled with the formula  $X_cO_aH_b$  are acids or bases by measuring the pH

---

---

---

---

---

---

---

---

**X<sub>c</sub>O<sub>a</sub>H<sub>b</sub> compounds and Acid-Base formulas**

- The formulas for acids are written in the form H<sub>b</sub>X<sub>c</sub>O<sub>a</sub>.

H<sub>2</sub>CO<sub>3</sub> (carbonic acid)

H<sub>3</sub>PO<sub>4</sub> (phosphoric acid)

---

---

---

---

---

---

---

---

**X<sub>c</sub>O<sub>a</sub>H<sub>b</sub> compounds and Acid-Base formulas**

- The formulas for bases are written in the form X<sub>c</sub>(OH)<sub>n</sub>.

NaOH

Mg(OH)<sub>2</sub>

Ca(OH)<sub>2</sub>

NH<sub>4</sub>OH

---

---

---

---

---

---

---

---

**X<sub>c</sub>O<sub>a</sub>H<sub>b</sub> compounds and Acid-Base formulas**

Q. Acid and base compounds typically contain oxygen, hydrogen, and another element (X). Based on formulas of common acids and bases, what distinguishes acids from bases with regard to element X?

Common acids: H<sub>2</sub>CO<sub>3</sub>, H<sub>3</sub>PO<sub>4</sub>, HClO, HNO<sub>3</sub>

Common bases: NaOH, Mg(OH)<sub>2</sub>, Ca(OH)<sub>2</sub>, NH<sub>4</sub>OH

Answer: \_\_\_\_\_

---

---

---

---

---

---

---

---

### Part 1 Objectives

▪ Based on pH data and the chemical composition of tested compounds, determine if acid-base properties can be predicted from:

- the number of oxygen and/or hydrogen atoms in  $X_cO_aH_b$  compounds?
- the electronegativity of element X?

Discussion questions 1-3, page 125

---

---

---

---

---

---

---

---

### pH measurement

pH paper

DEMO

pH meter

---

---

---

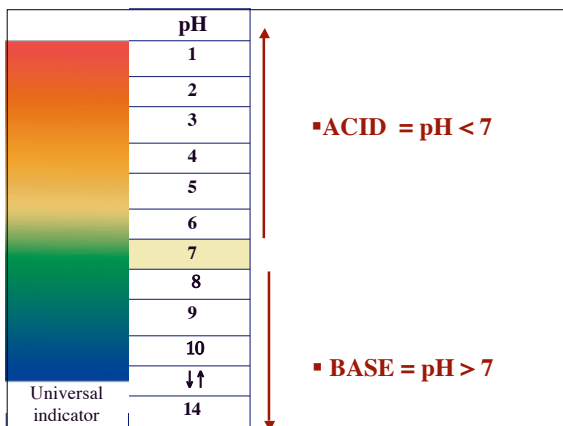

---

---

---

---

---

---

---

---

---

---

---

---

---

### Universal Indicator Demo

- Dry ice is added to water that contains a few drops of universal indicator to produce carbonic acid

Dry ice = CO<sub>2</sub>(s)

Universal indicator

- Universal indicator changes colors when pH changes; as the solution becomes more acidic, the pH drops

---

---

---

---

---

---

---

---

### pH scale? Why?

- On average, at 25°C, only 1 in 10,000,000 H<sub>2</sub>O molecules ionize:

$$\frac{1}{10,000,000} = 1 \times 10^{-7} \text{M}$$

---

---

---

---

---

---

---

---

### pH

$$\text{pH} = -\log [\text{H}_3\text{O}^+]$$

Example:

$$\text{pH } 7 = -\log [1 \times 10^{-7}]$$

- [H<sub>3</sub>O<sup>+</sup>] = mole/liter units
- pH values are unitless

---

---

---

---

---

---

---

---

### pH and [H<sub>3</sub>O<sup>+</sup>]

- **DIGIT/S LEFT of the pH decimal point = POWER of TEN by which the hydronium concentration value is multiplied.**

If pH = 3.27, [H<sub>3</sub>O<sup>+</sup>] = [ ? ] x 10<sup>-3</sup>

---

---

---

---

---

---

---

---

[H <sub>3</sub> O <sup>+</sup> ]	pH

---

---

---

---

---

---

**Q.** A sample of 0.1 M NH<sub>3</sub> has a pH = 11.0.  
What is [OH<sup>-</sup>]?

Answer: \_\_\_\_\_

---

---

---

---

---

---

---

---

---

---

### Bronsted Acids and Bases

▪ An acid is a proton (H<sup>+</sup>) donor - forms hydronium ions.

▪ A base is a proton (H<sup>+</sup>) acceptor - forms hydroxide ions.

---

---

---

---

---

---

---

---

---

---

### Acid-Base Ionization and Concentration

▪ Acid-base ionization is solvent and concentration dependent.

DEMO: Addition of water to glacial acetic acid

---

---

---

---

---

---

---

---

[H <sub>3</sub> O <sup>+</sup> ]	pH
10 <sup>-1</sup>	1
10 <sup>-2</sup>	2
10 <sup>-3</sup>	3
10 <sup>-4</sup>	4

10 <sup>-7</sup>	7
10 <sup>-8</sup>	8
10 <sup>-9</sup>	9
10 <sup>-10</sup>	10
↓↑	↓↑
10 <sup>-14</sup>	14

### Acid Strength and pH

• Stronger acids donate protons/ionize to a greater extent than weak acids.

• Stronger acids exhibit a lower pH than equimolar concentrations of weaker acids.

DEMO:  
pH of 0.10 M H<sub>3</sub>BO<sub>3</sub> versus 0.10 M HClO<sub>4</sub>

---

---

---

---

---

---

---

---

### Acid-Base Strength and % Ionization

#### % Ionization

---

---

---

---

---

---

---

---

**Acid-Base Strength and % Ionization**

$$\% \text{ ionization acid} = \frac{[\text{H}_3\text{O}^+]_i}{[\text{acid}]_i} \times 100\%$$

$$\% \text{ ionization base} = \frac{[\text{OH}^-]_i}{[\text{base}]_i} \times 100\%$$

Value in numerator determined from pH

---

---

---

---

---

---

---

---

**Q. 0.001 M HClO<sub>4</sub> = pH 3.0; 0.010 M H<sub>2</sub>CO<sub>3</sub> = pH 3.0**

1. Calculate the % ionization of HClO<sub>4</sub> and H<sub>2</sub>CO<sub>3</sub>.
2. Indicate if the acids are strong or weak.

% ionization HClO<sub>4</sub>

% ionization H<sub>2</sub>CO<sub>3</sub>

**Strength:** \_\_\_\_\_

---

---

---

---

---

---

---

---

**Q. The textbook figure below depicting pH and acid-base strength is misleading. How?**

---

---

---

---

---

---

---

---

## Acid-Base Strength and Structure

- Acid-base strength is dependent on structure.
- If H in a compound is a bare proton it will be an electron pair seeker and readily bond to water molecules to form  $[H_3O]^+$

### Example

H is a bare proton when bonded to an O atom, which in turn is attached to highly electronegative Cl in HClO

- Bond polarity is a dominant factor in determining relative strength of the oxyacids.

---

---

---

---

---

---

---

---

## Electronegativity of X vs. pH of $X_cO_aH_b$ compounds

Electronegativity of the elements*

  = Metalloids   
   = Nonmetals   
   = Metals

Q. Based strictly on electronegativity values, predict the acid strength of HBrO versus HIO.

Answer: \_\_\_\_\_ > \_\_\_\_\_

---

---

---

---

---

---

---

---

## Acid strength and structure

Q. The electronegativity of N = 3.0 and C = 2.5. Predict the comparative rate of reaction of 5 M  $HNO_3$  and 5 M  $HC_2H_3O_2$  with zinc:

Rate: \_\_\_\_\_ > \_\_\_\_\_

DEMO

---

---

---

---

---

---

---

---

## Acid Strength

"YIKES! This metal pan is reacting! Maybe something is in the tomato sauce?"

---

---

---

---

---

---

---

---

## Part 2. Conjugate Acid-Base Pairs

### Lab

- Determine and compare the pH of conjugate acids and bases.

### Information

- Conjugate acids and bases differ by one proton.
  - Conjugate acid of  $\text{HCO}_3^-$  is  $\text{H}_2\text{CO}_3$
  - Conjugate base of  $\text{HCO}_3^-$  is  $\text{CO}_3^{2-}$
- Teams will be provided with 0.10 M acids; conjugate bases will be provided as 0.10 M sodium salts

---

---

---

---

---

---

---

---

## Conjugate Acid-Base Pairs

- Exhibit predictable pH relationships

pH  $\text{H}_2\text{CO}_3(\text{aq})$  versus  $\text{HCO}_3^-(\text{aq})$  versus  $\text{CO}_3^{2-}(\text{aq})$  ?

Indicator pH scale

---

---

---

---

---

---

---

---

### Conjugate Acid-Base Pairs

pH  $\text{H}_2\text{CO}_3(\text{aq})$  versus  $\text{HCO}_3^-(\text{aq})$  versus  $\text{CO}_3^{2-}(\text{aq})$

→  
pH \_\_\_\_\_ (increase or decrease) ?

---

---

---

---

---

---
