# ***SPSS<sup>®</sup> 10.0 for Windows<sup>®</sup> Single-User Installation Instructions***

## ***What You Need to Run SPSS 10.0 for Windows***

The minimum hardware and software requirements for SPSS 10.0 for Windows are:

- Windows 95, Windows 98, Windows NT 4.0, or Windows 2000.
- Pentium or Pentium-class processor running at 90MHz or faster.
- 16MB or more of random-access memory (RAM). 64MB or more recommended.
- A hard disk with at least 80MB of available disk space (for the Base system).
- A CD-ROM drive.
- A graphics adapter with 800 x 600 resolution (SVGA) or higher.
- For connecting with an SPSS Server, a network adaptor running the TCP/IP network protocol.

You will also need the following information:

- Your serial number, which is included on your CD-ROM case.
- Your license code, which is included with your system on a separate sheet of paper. This enables you to install the Base system and any SPSS options that you have purchased. If your license number is all zeros or if you cannot find it, call your sales representative.

Note: You cannot install the single-user version of SPSS on an NT operating system that uses NT Terminal Server.

### ***Note for SPSS 7.5, 8.0, and 9.0 Users***

If you have customized menus or toolbars in your software and you want to keep your customized settings, do not uninstall the existing version of SPSS before installing SPSS 10.0. Uninstalling the existing versions will remove any record of your product customizations. When you install SPSS 10.0, install over the existing version of SPSS, in the same directory. This will preserve your customized settings.

## ***Installing SPSS***

To install SPSS, insert the CD-ROM into the CD-ROM drive. The AutoPlay feature will present a menu. To run the Setup program, choose Install SPSS, and then follow the instructions that appear on the screen.

## ***Invoking the Setup Program Manually:***

You can also invoke the setup program manually:

- From the **Start** menu, choose **Run**.
- In the Run dialog box, type `d:\setup`. (If you aren't using the D drive, enter the appropriate drive location.)
- Then follow the instructions that appear on the screen.

## ***Setup Type***

**Typical.** A Typical installation includes the sample data files, help files, TableLooks, and the Statistics Coach. This does not include versions of the syntax reference manuals in electronic (PDF) form.

The Statistics Coach requires either Internet Explorer 4 or Internet Explorer 5. If you don't have Internet Explorer 4 or 5, an installable version of Internet Explorer 5 is available on this CD.

If you don't want to install Internet Explorer, you should use the Custom installation and deselect the Statistics Coach.

**Compact.** A Compact installation includes only the minimum set of files necessary to run SPSS.

**Custom.** A Custom installation allows you to specify which components are installed. If you want to install electronic (PDF) versions of the syntax reference manuals on your hard drive, you need to choose the Custom option.

## ***Custom Installation***

**Sample Data.** Sample data files, including files used to create many of the examples that appear in the manuals.

**Help Files.** Comprehensive on-line help for all components and options, including tutorials, context-sensitive dialog help, and right-mouse-button help.

**Basic Scripting.** Installs Sax Basic, several sample scripts, and the files necessary to use OLE Automation with this software.

**Production Mode Facility.** The Production Facility provides the ability to run this software in an automated fashion. The program runs unattended and terminates after executing the last command, so you can perform other tasks while it runs. Production mode is useful if you often run the same set of time-consuming analyses, such as weekly reports.

**Statistics Coach.** The Statistics Coach is an interactive, wizard-like 'advisor' designed to help you choose the type of statistical analysis or display to use with your data. The Statistics Coach asks you a series of questions about the kind of data you have and what you want to do with it, showing you an illustrated example of each option. When you've decided what you want, you can open the appropriate dialog box from within the Statistical Coach itself. The Statistics Coach requires either Internet Explorer 4 or Internet Explorer 5. An installable version of Internet Explorer 5 are available on this CD.

**Syntax Guides.** An Adobe Acrobat version of the Syntax Reference Guide is included with the CD-ROM version of this software, providing comprehensive on-line instructions for using the command language. If you select this option, Setup will install the Syntax Guide on your hard disk. If you choose not to install the Syntax Guide, you can still run it directly from the CD-ROM.

## ***Installing Acrobat Reader***

The electronic version of the Syntax Reference Guide requires Acrobat Reader 3 or later. Some product brochures on the CD require Acrobat Reader 4. If you don't already have Acrobat Reader 4, the setup procedure will offer to run the Acrobat Reader setup program.

## ***Updating or Modifying Your Installation***

To add or remove a component or an SPSS option, run setup.exe from your CD-ROM. Select any new components or options that you want to include. Make sure that every option you want to include is selected, including any previously installed components. If you are adding an SPSS option, you may need to enter your new license code, although it will not be necessary to enter your old license number(s) again.

To remove a component or an option, run setup.exe. When you reach the dialog box associated with the item you want to remove, deselect that item. Make sure that every option you want to include is selected, including any previously installed components. Please note that this is not an effective way to uninstall SPSS. (See the "Uninstalling SPSS" section for information on uninstalling SPSS.)

## ***Renewing Your License***

If you have renewed your license for the Base System or any SPSS option, you can update it without going through the entire installation process by running licrenew.exe. To run this utility:

- Open an MS-DOS window.
- Go to the SPSS directory.
- Type licrenew.exe.

## ***Uninstalling SPSS***

- From the Start menu choose:
  - Settings
  - Control Panel
- From the Control Panel, choose Add/Remove Programs.
- Click the Install/Uninstall tab, and choose SPSS for Windows 10.0 from the list.
- Click Add/Remove.

Note: To uninstall in any Windows NT environment, users are required to log in as the same user that installed SPSS.

## ***Running Multiple Versions of SPSS***

If you maintain different versions of SPSS on a single machine, follow the instructions below.

Note: Although you can run multiple instances of SPSS 10 simultaneously and you can install multiple versions of SPSS on the same computer, you should not run multiple versions of SPSS (e.g., SPSS 10 and SPSS 9) simultaneously.

### ***Running SPSS 10.0 and SPSS 7.5***

Copy the following files from the SPSS 10.0 directory to the SPSS 7.5 directory:

- rereg75.bat
- 75.dat
- dregedit.exe

Each time you need to switch versions, run the appropriate .bat file before opening SPSS. This will restore the system settings necessary to run that version of SPSS. To run one of these utilities:

- Open an MS-DOS window.
- Go to the directory that contains the version of SPSS that you want to run.
- Type the name of the utility (rereg75.bat for SPSS 7.5 or rereg.bat for SPSS 10.0).

### ***Running SPSS 10.0 and SPSS 7.5.2 or Higher***

It is not necessary to do anything before switching between SPSS 10.0 and SPSS 7.5.2 or higher.

## ***Installing Database Drivers***

The Database Wizard uses data sources to retrieve data from databases. You can read data from any database format for which you have an installed driver.

**Before you install.** If you want to retrieve data from databases in a network environment (local area or wide area network), contact your SPSS system administrator for information about how to configure your desktop computer with data sources. If there is no system administrator at your site you can install and configure data sources yourself. Installable versions of database drivers from SPSS and Microsoft are available on the CD. We recommend that you use the SPSS drivers unless you need a driver for Microsoft Access.

### ***To Install the DataDirect Connect Drivers***

- Insert the SPSS for Windows 10.0 CD-ROM into the CD-ROM drive.
- Choose Install SPSS Data Access Pack from the Autoplay menu, and then follow the instructions that appear on the screen.
- In the Select Components dialog box, select DataDirect Connect ODBC 3.50 Drivers, click Change, and select the drivers that you want to install.

- You may also want to select Online Documentation, which includes the Connect ODBC Reference with detailed information about requirements, configuration, and use of each driver.

***To Install the Microsoft Database Drivers (Microsoft Data Access Pack)***

- Insert the SPSS 10.0 for Windows CD-ROM into the CD-ROM drive.
- Choose **Browse** the CD-ROM from the Autoplay menu.
- Double-click the Microsoft Data Access Pack folder.
- Double-click Microsoft Data Access Pack.exe
- Click **Yes** to install the Microsoft Data Access Pack.
