Robert Scherrer, Roman Scoccimarro, Marc Manera

Skewness and Kurtosis

$$S_3 = \frac{\langle \delta^3 \rangle}{\langle \delta^2 \rangle^2}$$

$$S_4 = \frac{\langle \delta^4 \rangle - 3\langle \delta^2 \rangle^2}{\langle \delta^2 \rangle^3}$$

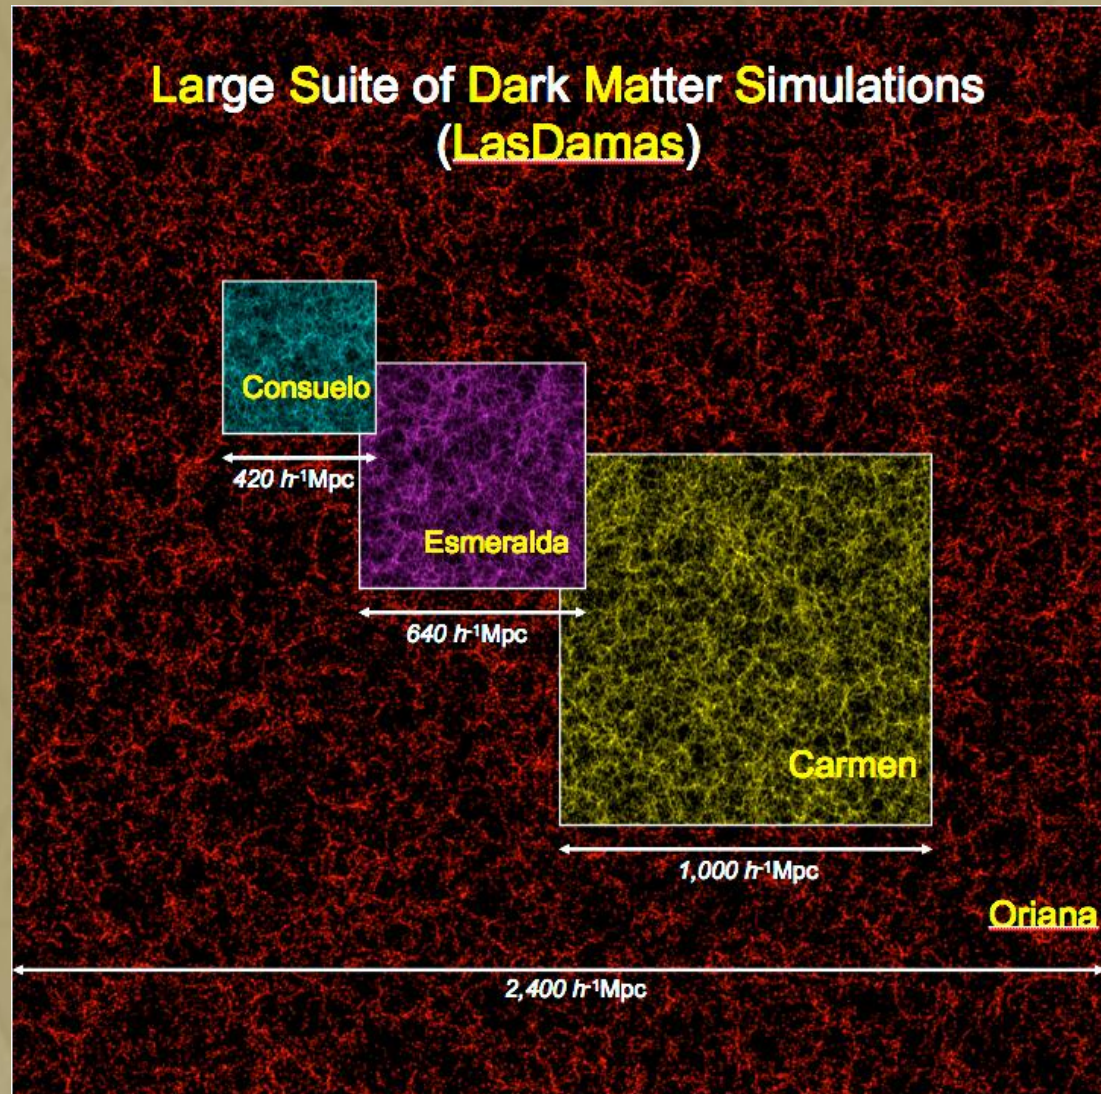

N-body Simulations

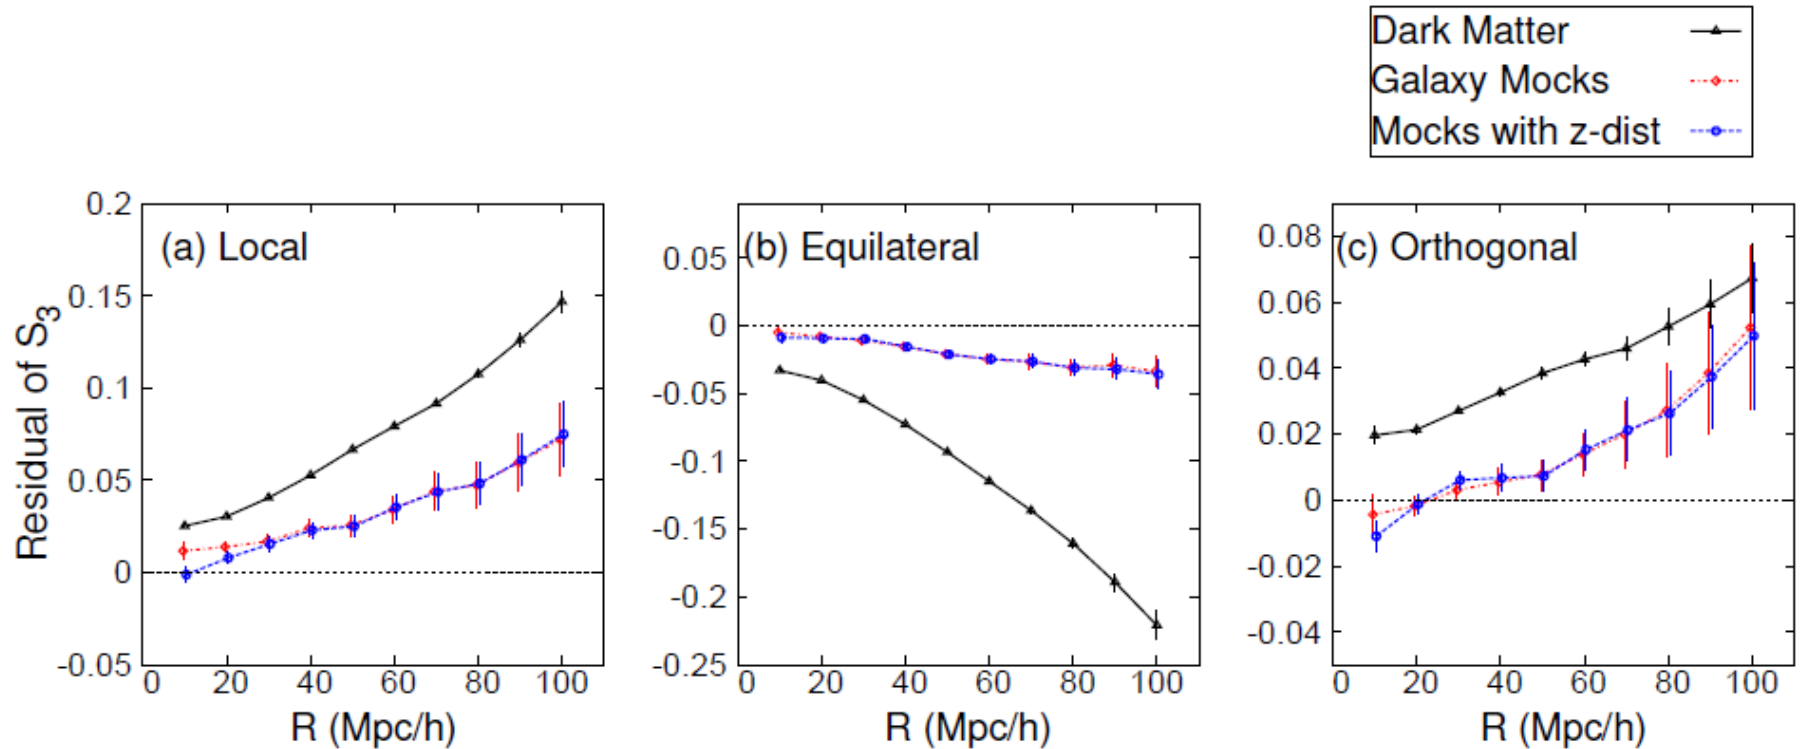

Three models:

- Local ($f_{\text{nl}}=100$)
- Equilateral
- Orthogonal

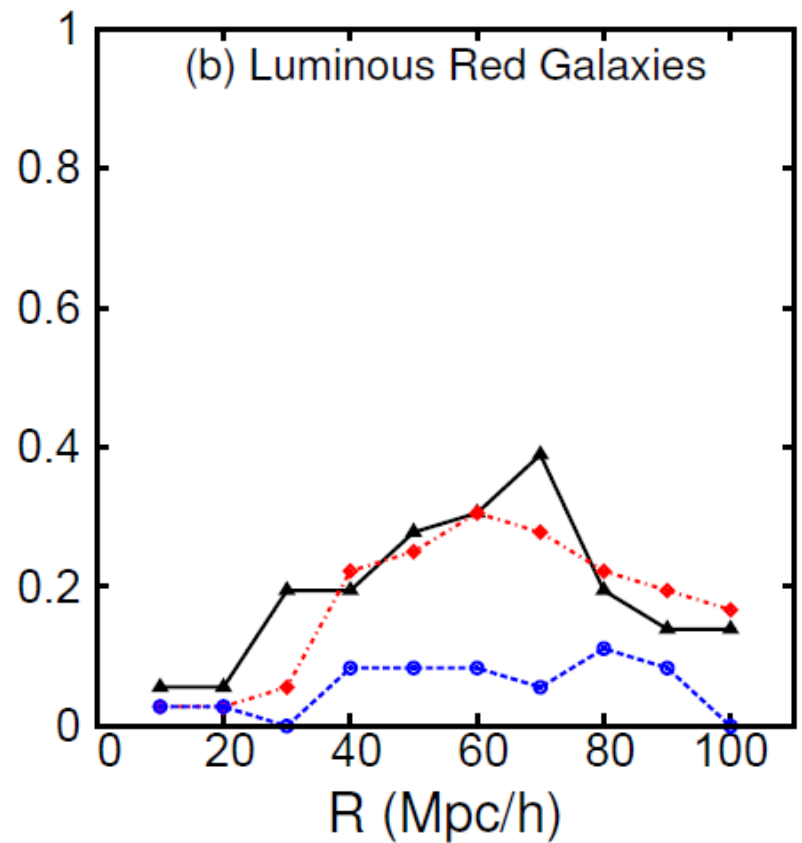

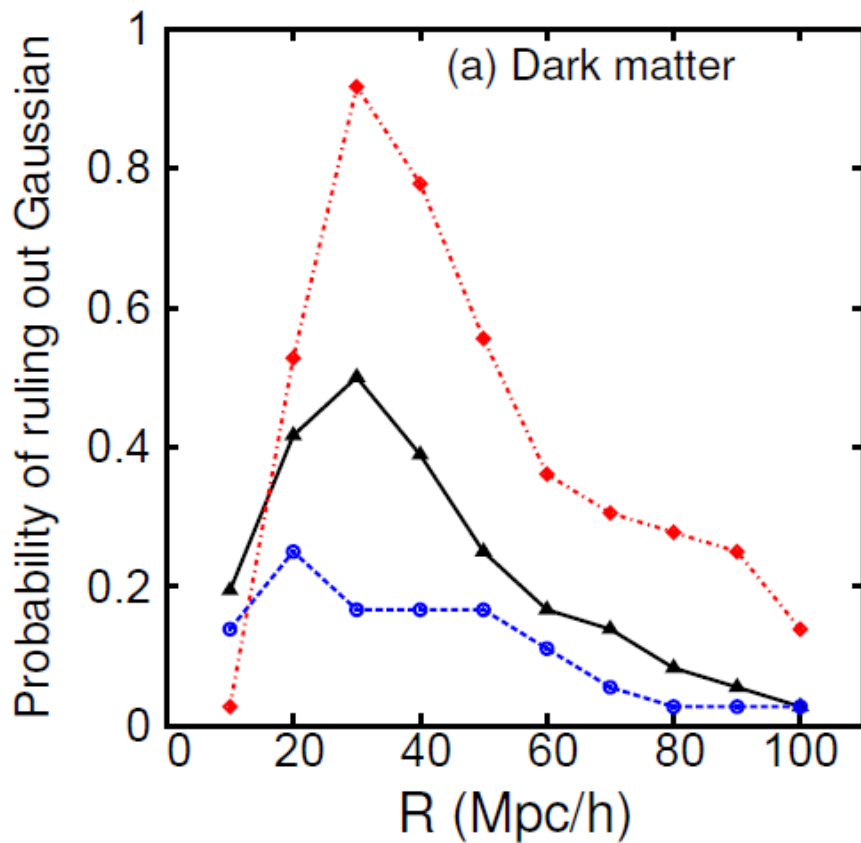

Compare to

- Gaussian

$$Residual = \frac{S_{Non-Gaussian} - S_{Gaussian}}{S_{Gaussian}}$$

Summary

- **Redshift distortions do NOT affect the chance of detecting Non-Gaussianity with S_3 and S_4 .**
- **There are some preferred scales.**
- **For surveys like BOSS, skewness and kurtosis are NOT sensitive enough.**
