AC213: Web Project Assignment #3 Completion Information

Due: Thursday, November 30, 2006 by 1:00 PM EST

A. Specific requirements for this assignment
B. Turn-in instructions

A. Assignment #3 Requirements

1) You should have a schematic overview of the structure and content of your site in the form of a provisional skeleton site.

What does "skeleton site" mean? Skeleton site means having your home page (index.html) nearly complete, with links to new, planned pages containing brief summaries of their eventual content and links to the other main pages to which they will be connected.

2) You will also create a notes.html page that contains all of the relevant bibliographic information (author, title, publisher, page numbers, etc.) for any quotations/citations drawn from your sources. The notes.html page is not the same as your bibliography.html page, which contains an alphabetized (by author) list of ALL of the sources you used in your research. Your notes.html page lists only those sources that you cite directly from.

Please be sure to visit Web Project Resources on the AC213 website for other valuable information regarding your specific website, including citation methods.

B. Turn-In Directions

Use the SSH Secure File Transfer Client (or Fugu) to upload your new and changed files required for this assignment (including the images used in your website) to your web space.

Once you’ve checked that everything on your website works correctly on the web (including a computer not on campus), email <mcotera@umich.edu> and <mgsmith@umich.edu> with your project title, your URL (that you tested above), and the names of all group members. There should not be any attachments to this email. Only one email per group is necessary, but you must CC (carbon copy) your other group members. You’re done!

If you have any additional questions, please contact <mgsmith@umich.edu> as soon as possible. As the availability of the web consultant cannot be guaranteed as the assignment deadline approaches, you are advised to begin or at least practice and test this process as soon as possible.

The web consultant will not be able support you easily if you choose to use web creation software other than Dreamweaver.
